### 3.125(a) REPEAT

#### FACILITIES, GENERAL.

The chain link fence is leaning in the upper corner of the pen housing 2 black buck antelope. The fence sways when the support poles are pushed in several places along the length of the fence line. The wood is rotting on the gate separating the 2 sections of the pen. This gate is kept closed by a strand of rusting hay wire. There is a hole at the bottom of the chain link in the upper section of the fence line near the feed room .

One support pipe has broken off at the base at the lower end of the goat pen. There is a gap at the bottom of the fence near the broken pipe which has been partially filled with rocks.

There is a small gap at the bottom of the perimeter fence where it attaches to the tunnel.

The weak fence line , gate and holes in the fence line create potential areas for animal injury. The facility must be kept in good repair to provide a safe housing area for the animals. NOTE : Similar maintenance issues were found on last inspection 11/11/16.

### 3.125(c)

#### FACILITIES, GENERAL.

Tools and other items are stacked next to the supply of alfalfa making it difficult to clean around the hay and to check for pests. They also provide a hiding area for pests such as rodents. Supplies of hay should be stored in such a manner to prevent contamination by vermin. Keeping the area around the hay free from debris and other items will allow pest problem to be quickly detected which would aid in protecting supplies from contamination.

CORRECT BY : 10-24-17

The inspection and exit briefing were conducted with the maintenance manager.
