WILMA JINSON

Type: ROUTINE INSPECTION
Date: 01-MAY-2014

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

1. There were 6 weaned Pug puppies (no ID) housed in the whelping facility that appeared to have discharge coming from their noses. The smallest puppy in the litter was repetitively coughing. These puppiesA@? enclosure was directly next to the enclosure housing the Miniature Pinscher puppy currently receiving treatment for respiratory symptoms. The puppies were not receiving treatment and the licensee nor the kennel staff were aware of the puppies condition.

****The licensee shall have the puppies seen by a veterinarian to obtain a written diagnosis and treatment plan. Treatment should be provided as directed and documented in the animals health records. The puppies should be by the veterinarian no later than the close of business 5/3/14.

2. The red, female, adult Dachshund (#0A02236428) with very dry skin was seen by a veterinarian on 4/29/14. The licensee was provided with a written diagnosis and treatment plan. The treatment plan prescribed that the dog be bathed 2xs weekly. As of 5/1/14 the dog had not received this treatment. Her skin still appeared flaky.

3. The black and white, adult, female Miniature Schnauzer (#0A01387878) whose white, left, hind paw had discharge oozing from a wound on its top surface was seen by a veterinarian on 4/29/14. The licensee was provided with a written diagnosis and treatment plan. The treatment plan indicated that the animal should receive oral antibiotics; her foot should be treated topically, and the foot should be trimmed/clipped between the digits to facilitate draining. The licensee provided written documentation of both the topical and oral treatments. However, the dogs foot had not been cleaned or the hair trimmed as instructed in the treatment plan.

****The licensee shall provide treatment as prescribed in the written treatment plan. These treatments should be recorded in the animals?BA health care records.

4. There was an adult, male, white and brown Chihuahua documented on 4/24/14 for having excessively long toe nails, especially on the dew claws. As of 5/1/14 the dogs nails had not been trimmed. Excessively long nails are at an increased risk of being ripped out or broken, resulting in a painful injury.

****The licensee must trim this dog's nails and ensure that the toe nails of all the dogs at the facility are maintained at a length which is not likely to result in injuries.

Inspection Report

2.40(b)(3) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include (3) Daily observation of all animals to assess their health and well-being.

The licensee and kennel staff are not providing adequate daily observation of the animals at the facility.

Cocoa the red, female, adult Dachshund (#0A02236428) also documented for her skin condition, whelped puppies on 4/25/14. After having one puppy, the kennel staff moved her and her puppy to a different enclosure. The dog then escaped from the enclosure and proceeded to whelp another puppy in a grass area beside the facility. The kennel staff found the female outside of her enclosure the next day and returned her to her enclosure. The 2nd puppy was not found until 4/27/14. At which time the staff attempted to hand feed and revive the puppy. It died on 4/28/14.

Additionally, there are 6 weaned Pug puppies that were observed by the inspector on 5/1/14 with discharge coming from their noses and one puppy repetitively coughing. The licensee nor the kennel staff were aware of this condition.

**** A daily observation to assess the health and well-being of the animals at the facility should be performed daily. Direct and frequent communication should be used to communicate these concerns to the attending veterinarian and timely treatment provided. TO BE CORRECTED FROM THIS DAY FORWARD.

3.6(a)(2)(10) REPEAT

PRIMARY ENCLOSURES.

(a) General requirements (2)(x)

Inside the whelping facility there were 6 weaned Pug puppies that were observed on 4/24/14 with their feet and legs falling through the flooring of the enclosure. On 5/1/14 the puppies were provided a plastic crate with a solid floor inside the enclosure. However, the crate only covered half of the floor of the enclosure. When the puppies were out of the enclosure their feet and legs could still pass through the floor. Additionally, there was a 6 day old puppy in an enclosure that had a solid mat covering a portion of the floor. The puppy was observed off of the mat on the wire coated flooring that had openings large enough for its feet and legs to pass through. Young animals that are not provided adequate support can result in an inability to learn a proper gait and has the potential to cause injury. The licensee shall provide enclosures that have flooring that does not allow the feet or legs of the animals to pass through any openings of the floor.

A focused inspection and exit briefing was conducted with the licensee on May 1, 2014. This inspection was limited to the non-compliant items 2.40(b)(2) and 3.6(a)(2)(x) found during a routine inspection on April 24, 2014. An additional citation was included for 2.40(b)(3)

Inspection Report

The following dogs were identified during the April 24, 2014 inspection and the licensee is following the treatment prescribed.

* The adult male Chihuahua (#0A01480129) who was squinting and excessively blinking his left eye was seen by a veterinarian on 4/29/14. The licensee was provided with a written diagnosis and treatment plan. The licensee was instructed to monitor the eye and return in 10 days if the condition had not improved. On 5/1/14 the dog was still squinting, excessively blinking and the eye was watering. The licensee stated she intended to follow the treatment plan as prescribed.

* The black, male Miniature Pinscher puppy (no ID #) was seen by a veterinarian on 4/29/14. The licensee was provided with a written diagnosis and treatment plan. On 5/1/14 the licensee provided a written log of treatments provided to the puppy as directed in the treatment plan. The puppy appeared alert and no longer exhibited labored breathing.
