Type: ROUTINE INSPECTION
Date: 22-OCT-2014

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

In enclosure #8, Frosty a male Maltese dog has an accumulation of green/brown material adhering to the upper portion of the cheek teeth. The normal tooth structure cannot be identified under this material. Dental issues can be painful, may decrease the dog's ability to eat normally and negatively impact the overall health of the animal.

In enclosure #3, Benny a male Yorkie has excessive clear mucous discharge from both eyes and the left eye has a cloudy appearance to the pupil. Color changes and mucous discharge to the eye could be indicative of infection, injury or other medical issues.

In enclosure #12, Sparky a male Schnauzers gum line on the upper right portion of the cheek teeth is red and has receded away from a portion of the teeth. There is a buildup of green material along the gum line that is receding. Dental issues can be painful, may decrease the dog's ability to eat normally and negatively impact the overall health of the animal.

Licensee must have these animals evaluated by a veterinarian to correct the issues and provide documentation of completion. Licensee must maintain program of veterinary care to prevent, control, and treat diseases and injuries.

2.75(b)(1)

RECORDS: DEALERS AND EXHIBITORS.

The licensee has acquired a nilgai and has no acquisition form filled out or other information on where the nilgai was acquired.

The licensee informed the inspectors of two coatimundis were born on the premises and then were sold but there were no record of disposition with the correct information regarding the transaction of the two animals.

Every dealer must make and maintain records which fully and correctly disclose the required information regarding the acquisition and disposition of animals other than dogs and cat. This is required to ensure that the transactions

Inspection Report

are done legally, so that animals may be properly tracked through during the inspection process, and to ensure the humane care and use of animals during transport, housing, and exhibition. Ensure that records are available for the inspector at time of inspection.

Correct from this day forward.

3.1(c)(1)(2)

HOUSING FACILITIES, GENERAL.

Inside enclosure #5, there is a T-Post that has a spade connected and is not all the way in the ground, exposing sharp pointed ends upward toward the dogs enclosed. The sharp ends of the spade poses a risk of injuring the animals. The enclosure must be free of any jagged edges and sharp points that pose a risk of injury on the animals contained.

To be corrected by October 24, 2014

3.131(a)

SANITATION.

Cleaning of enclosures.

In the Coatimundi enclosure there is an excessive buildup of brownish material on the resting platforms, wire fencing, and on the walls. Improper cleaning of the enclosure poses a risk of disease hazards, contamination, and odors. The enclosure shall be cleaned as often as necessary to prevent contamination, minimize disease hazards, and reduce odors to protect the animals contained.

To be corrected by October 27, 2014

Inspection and exit interview was conducted by APHIS personnel with facility representative.
