Separation.

Since the last inspection, the facility is still not ensuring that the Patagonian cavy housed together are compatible. Per the facility representative, once they removed and separated the younger male cavy that was actively being chased by the older male cavy during the previous inspection on 3/12/25, a different young male cavy within the same shared enclosure was found seriously injured on 3/13/25. According to the facility representative, the injuries were due to aggression from the older male and this younger male was euthanized by a veterinarian because of these injuries. The facility is now housing the older male cavy alone.

Housing incompatible animals together in the same primary enclosure can lead to stress, injury, and even death. Animals housed in the same primary enclosure must be compatible.

This inspection and exit interview were conducted with facility representatives.
