### 3.125(a) REPEAT

#### FACILITIES, GENERAL.

- A metal pasture gate was broken, and the gate was flat on the ground in a pasture housing three camels. Animals passing through this broken gate are at an increased risk of injury.
  - A shelter accessible by two adult camels has a damaged metal wall. The wall is buckled on the inside, and the outer metal edges are curling upward. This renders the shelter less effective, and is also a potential source of injury to the animals.
- Facilities must be kept in good repair and maintained properly to protect the health and welfare of the enclosed animals.

This inspection and exit interview were conducted with facility representative.
