

## Inspection Report

Henry Family Farms LLC  
P O Box 533  
Somonauk, IL 60552

Customer ID: **331560**  
Certificate: **33-C-0462**  
Site: 001  
HENRY FAMILY FARMS LLC

Type: ROUTINE INSPECTION  
Date: 25-JUL-2017

### 3.56(a)(1)

#### SANITATION.

Excessive bird feces were present on top of the rabbit enclosure during the time of inspection. The affected rabbit enclosure was located under the stairs in the barn. Excessive bird feces were also present on the stairs directly above the rabbit enclosure. The license holder stated that chickens travel up the stairs to roost every evening. Feces can spread disease.

Remove the feces and clean the rabbit enclosure to promote animal health.

To be corrected: 7-29-17

### 3.128

#### SPACE REQUIREMENTS.

Five animals are housed in enclosures with inadequate space. A juvenile red kangaroo, a red-necked wallaby, an agile wallaby, and a fox are each housed in large, black collapsible dog crates. A skunk is housed in a medium wire enclosure similar in construction to the dog crates. None of these animals have enough space to make normal postural and social adjustments with adequate freedom of movement. Inadequate enclosure space can cause stress, abnormal behavior patterns, and depression in animals.

Animals must be housed in enclosures that allow normal postural and social adjustments with adequate freedom of movement to provide for their well-being.

To be corrected: 1-1-18

### 3.131(d)

#### SANITATION.

A large number of flies were present throughout the building containing the wallabies, kangaroo, hedgehog, groundhog, the skunks, the juvenile Patagonian cavy, the foxes, the African crested porcupine, and the juvenile pigs during the time of inspection. The flies were prominent on the window, on the window sill, and on the food

## Inspection Report

---

preparation counter. They were also observed inside of the animal enclosures and on the animals. The license holder had two sticky fly traps in the building; however, the two traps are not effectively controlling the fly population. Flies carry and spread disease.

Implement and maintain an effective program to control the flies

Note: This was corrected between the time of inspection and the exit interview.

This inspection and exit interview were conducted with the owner.
