Type: ROUTINE INSPECTION
Date: 17-AUG-2022

2.40

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

During this inspection the Program of Vet Care was not available for review. It is apparent that this facility has an Attending Vet, however, the PVC was not available during the time of this inspection.

***To Be Corrected By: Aug 24, 2022

2.75(b)(1)

Repeat

Records: Dealers and exhibitors.

Records were not available for review during this inspection.

All acquisition and disposition records need to current and available for review at the time of the inspection.

3.56(a)(2)

Sanitation.

At the time of this inspection there were 3 rabbit hutches that were in need of attention. All three had an accumulation of feces present. The hutches with the solid floors were 3/4 covered with packed feces and hair. The hutch with wire flooring had 2"-3" of feces and hair under their enclosure that was reaching the animal portion of the enclosure. These hutches need to be cleaned out on a weekly basis.

***To Be Corrected By: Aug 24, 2022.

Inspection Report

Facilities, general.

The pen on the left, that houses the Jacob sheep had fencing bowing inward. There are now large gaps under the fence that could allow unwanted animals access. This area needs to be addressed.

3.130

Repeat

Watering.

As we stated this inspection it was noted that several of the water receptacles in the animal enclosures were dirty. There was an accumulation of dirt, grim, hay, and algae present. All animals need to have access to potable water. These receptacles need to be kept cleaned and sanitized.

3.131(a)

Repeat

Sanitation.

At this time it was noted that the main barn on the property that houses the llamas, sheep and goats had an accumulation of soiled hay, bedding and feces present. The middle aisle had two large piles of llama manure, the area around the large water trough had 2"-3" of mud around the base. And the stalls / pens on the right side of the barn still had ~2' of "winter pack" present. This barn needs to be thoroughly cleaned to protect the animals from any disease hazards.

This inspection and exit interview were conducted with the licensee.
