Type: ROUTINE INSPECTION  
Date: 23-MAR-2023

### 3.15(a)(6)

#### Primary enclosures used to transport live dogs and cats.

A flight containing 44 dogs arrived at JFK International Airport on March 23, 2023, at 6:16 am ET, shipped from Zhengzhou International Airport (Zheng Zhou, China) on March 22, 2023 (AWB #272CGO73107300).

Primary enclosures for 16 dogs were missing the words "Live Animals," on top of the transport carriers ("Brando" microchip# 900115002227848, "Blaine" microchip# 900219000038474, "Buddy" microchip# 900219000038302, "Skippy" microchip# 900219000038304, "Potato" microchip# 900115002107828, "Pike" microchip# 900219000038131, "Shadow" microchip# 900115001315352, "Captain" microchip# 900219000038318, "Rosie" microchip# 900219000038240, "Sugar" microchip# 900219000038147, "Misty" 900219000038554, "Cinnamon" microchip# 900115002107399, "Princess" microchip# 900219000038314, "Velvet" microchip# 900219000038202, "Charlie" microchip# 900115002107420, "Andie" microchip# 900115001084369). Lack of proper markings on enclosures may cause inappropriate handling, tilting, which may lead to injury to the dogs. Unless the enclosure is permanently affixed to the conveyance, each enclosure must be clearly marked on top and on one or more sides with the words "Live Animals" in letters at least 1 inch high.

## Inspection Report

---

A flight containing 44 dogs arrived at JFK International Airport on March 23, 2023, at 6:16 am ET, shipped from Zhengzhou International Airport (Zheng Zhou, China) on March 22, 2023 (AWB #272CGO73107300).

The following primary enclosures had inadequate space:

- A black mixed breed, "Shadow" microchip# 900115001315352. "Shadow" measured 40 inches in length and 29 inches in height, while the enclosure measured 33 inches in length and 23 inches in height.
- A yellow Labrador retriever, "Sugar" microchip# 900219000038147. "Sugar" measured 31 inches in length and 27 inches in height, while the enclosure measured 28 inches in length and 19.5 inches in height.
- A white and black Old English sheepdog, "Brando" microchip# 900115002227848. "Brando" measured 38 inches in length and 29.5 inches in height, while the enclosure measured 35 inches in length and 27 inches in height.
- A white and black Old English sheepdog, "Charlie" microchip# 900115002107420. "Charlie" measured 36 inches in length and 28 inches in height, while the enclosure measured 33 inches in length and 23 inches in height.
- A yellow Labrador retriever, "Rosie" microchip# 900219000038240. "Rosie" measured 31 inches in length and 21 inches in height, while the enclosure measured 28 inches in length and 19.5 inches in height.
- A white Pomeranian, "Kali" microchip# 900115002107844. "Kali" measured 22 inches in length and 16 inches in height, while the enclosure measured 19.5 inches in length and 10 inches in height.

Inadequate space during transport can cause stress, uncomfortable conditions, and prevent normal postural adjustments. Primary enclosures used to transport live dogs must be large enough to ensure each animal has enough space to turn about normally while standing, to stand and sit erect and to lie in a natural position.

This inspection was conducted with animal facility representatives on March 23, 2023. The exit interview was conducted with an airline representative by phone on March 29, 2023.
