Type: ROUTINE INSPECTION
Date: 14-MAY-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The 8 yr old female cougar 'Sissy' had a small laceration on the top of her right front paw between the third and fourth digit. The laceration is approximately 1-1.5 inches in length that is spread apart approximately 1/8 inch at the widest part. There is pink tissue exposed, and possibly some swelling around the injury. The cougar does not appear to be favoring the paw or in obvious discomfort. The veterinarian has not yet been contacted in regards to this injury.

Untreated wounds and lacerations can be painful, and if left untreated can increase the possibility of infection and both situation can affect the health and welfare of the regulated animal.

The licensee needs to consult with their veterinarian for proper diagnosis and treatment of the injury.

To be corrected by: May 14, 2014

2.40(b)(3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The female cougar 'Sissy' has a laceration located on the top side of her right front paw between the third and fourth digit. The injury exposes the pink tissue between the toes and appears a little swollen around the edges of the injury. It is unclear as to when the injury happened as it was not observed until the inspection. The wound looks at least 24-48 hrs old, however it was unclear due to the animal pacing. The owner advised that this was the first time he had noticed the injury.

All regulated animals should be observed daily to make sure they are healthy and have not incurred any injuries, wounds or illnesses on a regular basis. If daily observations are not made an animal can have a treatable issue become more serious or chronic if left unnoticed or untreated.

The licensee must make sure to conduct thorough daily observations of the regulated animals to make sure they are physically and behaviorally healthy.

3.130 REPEAT

WATERING.

The water pan used for the cougar had a thick layer of algae around the sides and most of the bottom of the pan.

Algae growth can be a source of bacteria and possibly affect the health and welfare of the regulated animal if the water receptacles' are not kept clean and sanitary on a regular basis.

The water container needs to be cleaned frequently enough to prevent the growth of algae.

Inspection and exit interview conducted with licensee.
