### 3.4(c)

#### Outdoor housing facilities.

The wood walls in the stall enclosure that houses the dogs overnight is not impervious to moisture. Building surfaces in contact with animals must be impervious to moisture to facilitate cleaning and sanitization required by section 3.11(b)(2).

Correct by: Aug 1, 2022

### 3.13(a)

#### Veterinary care for dogs.

The two dogs at the facility have not had a complete physical examination from head to tail in the past year. In addition, the program of vet care only details schedule of rabies vaccination and monthly parasite control and does not contain a vaccination schedule for other diseases including parvo and distemper. The PVC section for dogs must be updated to reflect new guidance and the dogs must have a physical exam for their health and well being.

Correct by: July 30, 2022

### 3.75(a)

#### Housing facilities, general.

\*\*\* There are multiple sections of wire mesh in the large outdoor lemur enclosure that need to be addressed. Several of the wires are bent or broken and protruding into the enclosure. These wires need to be maintained in good repair to keep the area structurally sound and safe for the animals.

## Inspection Report

---

\*\*\* There are two wood structures in the bushbaby enclosure that are in disrepair with sections of the wood deteriorating. The includes the box that is raised up for sleeping and the structure on the ground. These wood structures need to be addressed and repaired or replaced for the safety of the animal.

\*\*\* There is a large hutch inside the wire enclosure section for the lemurs that has a broken lid. This hutch needs to be maintained to keep the structure in good repair for the safety of the animals.

Correct by: July 31, 2022

### 3.75(c)(1)

#### Housing facilities, general.

\*\*\* The wood walls inside the lemur enclosure are no longer sealed and impervious to moisture. Since this wall cannot be replaced, it must be managed in a manner that that can be readily cleaned and sanitized. The facility needs to be address any surfaces that cannot be readily cleaned and sanitized to facilitate cleaning of the area.

Correct by: Aug 30, 2022

### 3.75(c)(3)

#### Housing facilities, general.

The wire panel lemur enclosure inside the barn needs to be cleaned. There is a build up of debris throughout the wire mesh and on the unsealed wall inside the enclosure. These hard surfaces must be spot cleaned daily and sanitized by any method provided in 3.84(b)(3) of this subpart. This enclosure needs to be addressed for the overall health of the animals.

Correct by: July 15, 2022

### Facilities, general.

\*\*\* The capybara hutch is in disrepair and the lid of the hutch is worn and deteriorating. This hutch needs to be kept in good repair for the safety of the animal. In addition, there is an extra panel of wire mesh between the capybara and goats that is not fully connected but seeming cut in the middle, creating sharp wires along the top and mid level sections of fence line. These wires could be a hazard and should be addressed.

\*\*\* The prehensile tail porcupine's shelter has a heat mat that is screwed down to the base of the floor. There is a portion of the screw that is now protruding below the box where the animal has access as he comes down on a branch. These screws should be blunted down so nothing sharp is protruding into the area for the safety of the animal.

\*\*\* One older wood structure in the kangaroo enclosure has sections of the wood floor that are in disrepair and the sides walls of bamboo are separated from the structure exposing rusted nails. This structure should be removed or replaced for the safety of the animals.

\*\*\* There is a pile of unused wood and plastic building materials in the goat enclosure at the far fence line. Due to the playful nature of goats and the haphazard way the materials are stored, this can create a safety hazard for the goats. The materials need to be stored securely against the fence or in another area to keep the enclosure in good repair.

Correct by: Aug 1, 2022

### 3.127(b)

#### Facilities, outdoor.

Currently the artificial structure provided for the camel and goats only provides shelter from inclement weather if the animals are directly in the center of the structure and rain falls straight down. There are no sides to the structure and if the

rain comes in sideways, the animals are not able to stay dry. Per this regulation, an effective shelter must be provided for all animals housed outdoors to afford protection from the elements. The facility does have adequate stalls in the main barn and should facilitate a method for animals to access stalls during periods of inclement weather or reassess the shelter to assure its adequacy for their comfort.
