2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A female husky "snowdrop" (ID 105) was seen limping on her right front leg. Close observation revealed she had an injury on her paw. The facility had noticed her favoring the leg this morning. The attending veterinarian has not been contacted and the injury has not been treated. Injuries such as these must be treated promptly to avoid infection and further pain in affected dogs. Ensure that the attending veterinarian is contacted and treatment instructions are followed.

Correct by 8/10/2017

3.11(a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

The areas under the outdoor portions of the enclosures and areas under the husky enclosures have a buildup of soiled material that has a large amount of flies on it. The husky's enclosures had an excessive amount of flies that would come off of this material and go up into their enclosures. This build-up of material attracts flies and flies can cause animals to get sick and can spread sickness to other animals. The soiled material underneath enclosures must be removed often enough to reduce flies and odors in around the enclosures.

Correct by 8/11/17.

This inspection and exit interview were conducted with a facility representative.
