Certificate: **93-C-0101**  
Site: 001  
City of Santa Ana

Type: FOCUSED INSPECTION  
Date: 26-FEB-2025

---

### 2.131(c)(1) Critical

#### Handling of animals.

On 1/21/2025, a nearly 15-year-old male Sun Conure, #B11022, was found missing when he failed to arrive for his morning feeding. He had been observed earlier the same morning for the daily observation count of this large walk-in aviary containing twelve birds. This incident was self-reported on 1/24/2025 when #B11022 was officially recorded as missing and is still missing.

During public exhibition, any animal must be handled so there is minimal risk of harm to the animal and to the public, with sufficient distance and/or barriers between the animal and the general viewing public so as to assure the safety of animals and the public.

Correct by 2-26-2025 and forward.

### 3.158(d)

#### Cleaning, sanitization, housekeeping, and pest control.

At approximately 11:30 am during the inspection of the walk-through aviary, a rat was observed running on the floor of the bird feeding area next to the entrance/exit area of the enclosure. Rats can carry diseases or possibly harm birds in the enclosure.

Pest control. A safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests must be established and maintained so as to promote the health and well-being of the birds and reduce contamination by pests in animal areas. Insecticides, chemical agents, or other pest control products that may be harmful to the birds must not be applied to primary enclosures and other bird contact surfaces unless the application is consistent with manufacturer recommendations or otherwise approved for use and does not harm birds.

Correct by March 31, 2025

This inspection and exit interview were conducted with a facility representative.
