Site: 001
ROCKY HILL REINDEER

Type: ROUTINE INSPECTION
Date: 22-MAR-2022

3.125(a) Repeat

Facilities, general.

***There are two 4 x 8 sheets of plywood on the divider fence to the left as you enter the first section of the enclosure. The panels are weathered and damaged with wood breaking off of them. The panels are said to have been placed to protect the reindeer during season but currently the panel on the gate is loose and unattached at the bottom right easily flexing out when touched which may allow the reindeer to become injured. There are several pieces of broken plywood from these panels on the ground where the reindeer have access. The plywood shall be removed, repaired or replaced and broken boards on the ground removed to protect the reindeer from injury.

***The large tree that fell on the fence along the right side of the back enclosure was cited on a previous inspection is still laying on the fence causing the top line of the fence to bend down and outward, and the lower wire to bend inward into the enclosure leaving areas that may allow the reindeer to become hung up in the fence. The fence is in disrepair and shall be repaired or replaced to protect the reindeer from injury and to maintain them securely within the enclosure.

3.131(d) Sanitation.

Inspection Report

***The bottom of the wall of the food storage room has a board that has broken away directly beneath the food being stored for the reindeer revealing what appears to be a rat nesting area. There is a concentration of rat droppings in the dugout located there. Discussion with the licensee revealed there is no pest control program in place. A program shall be developed and utilized to prevent food contamination and minimize risk of disease hazard.

This inspection and exit interview were conducted with the licensee.
