Type: ROUTINE INSPECTION
Date: 24-JAN-2024

3.127(d)

Facilities, outdoor.

The perimeter fence is sagging in multiple sections which has reduced its height to less than six feet. The perimeter fence is also not flush with the ground, creating gaps underneath the fence.

An insufficient perimeter fence cannot effectively act as secondary containment for the animals inside and can allow unwanted animals or people to enter the facility and potentially harm the animals within. The perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient height (at least six feet) to keep animals and unauthorized persons out.

To be corrected by March 1, 2024.

This inspection and exit interview were conducted with a facility representative.
