Certificate: **31-A-0018**
Site: 001
LINDA BURRIER

Type: ROUTINE INSPECTION
Date: 16-OCT-2014

2.40(a)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** The written Program of Veterinary Care (PVC) lacks specific guidance for vaccination administration and for the prevention and control of ectoparasites, endoparasites, and blood parasites. The licensee must contact the attending veterinarian to have additional written guidance added to the PVC. This is required to ensure appropriate care is given to all dogs in the kennel and to ensure the attending veterinarian is aware of current vaccine and parasite prevention and control procedures.

Correct by: 01 NOV 2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** Male Westie (chip #105774846) has a pea sized red mass between the 2nd and 3rd toe of the right front foot. This dog is not limping and does not appear painful on this foot. The licensee stated he noticed this mass but does not have veterinary guidance in the Program of Veterinary Care nor has he called the attending veterinarian for guidance. The licensee must contact the attending veterinarian to have this animal examined and to have the veterinarian provide treatment recommendations. Treatment recommendations and treatments must be documented and maintained for future review by APHIS officials.

Failure to provide prompt appropriate care to the dogs for medical concerns may lead to prolonged pain and suffering in the animals.

Inspection Report

***No current records of animals in hand were available during this inspection. The licensee s daughter stated that they currently do not have an up to date Form 7005 for adults. A computer record from 2011 was found but has 62 dogs listed when only 35 adults were counted on today s inspection. The licensee must ensure that all dogs are kept on Form 7005 s and are kept current. This is required to assist the inspection process and ensure animal tracking is possible, which is especially important in the event of a disease outbreak.

Correct by: 01 NOV 2014

3.1(c)(1)

HOUSING FACILITIES, GENERAL.

*** Most of the enclosure doors on the inside runs for the sheltered kennel on the near side of the road are rusty. These doors require repair, replacement, or resurfacing to ensure that they remain structurally sound and can be properly sanitized. The licensee must ensure that all enclosure doors are kept in good repair and free from rust to allow them to be properly sanitized and structurally strong.

Correct by: 01 NOV 2014

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

*** There are at least three dog access doors that have a buildup of brownish grime. Surfaces in contact with the dogs that have dirt and grime can harbor disease hazards. The licensee must ensure that all surfaces in contact with the dogs are kept clean and sanitized at least once every two weeks using the methods in accordance with 3.11 (b) of this subpart to reduce disease hazards.

Correct by: 01 NOV 2014

3.9(b)

FEEDING.

*** In both the kennel on the near side and the kennel on the far side of the road, there are several self-feeders that have a buildup of food particles on the inside, and are dirty and grimy on the outside and the edges. There are also several that are chewed up and scratched. Feeders that are chewed and or scratched are not able to be cleaned and sanitized properly, and feeders that are dirty with grime can harbor disease hazards. The licensee must ensure that all feeders are maintained or replaced, and must be sanitized at least every two weeks using the methods in accordance with 3.11 (b) of this subpart to reduce disease hazards.
