Type: ROUTINE INSPECTION

Date: 09-JUL-2024

---

### 3.125(a) Critical

#### Facilities, general.

The enclosure housing five African Crested Porcupines did not protect the animals from injury. The animals were able to dig multiple deep burrows in their enclosure and on December 22, 2023, all five animals were found deceased in a natural dug tunnel that had collapsed on them. Crested porcupines are known to be voracious diggers and the licensee failed to put in place preventative measures in the enclosure to protect the animals. Enclosures must be designed and maintained in a manner that protects the animals from injury especially when engaging in natural behaviors such as digging and burrowing.

Correct by: July 15, 2024

This inspection and exit interview were conducted with the licensee.
