LIVE EARTH EXOTICS

Type: FOCUSED INSPECTION
Date: 08-JUL-2021

2.40(a)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

At the time of the inspection there was an alpaca that was down and appeared lethargic. The owner was treating for a meningeal worm for 2 days without contacting the attending veterinarian. The attending veterinarian was unaware of the animals condition and had not examined the animal. The animal's condition should have been communicated to the veterinarian in a timely manner so that it may receive adequate veterinary care. The animal was later seen after the inspection and treated for a thiamine deficiency per the veterinarian's guidance. There should be adequate care provided to the animals and their health maintained by the employed attending veterinarian for the well-being of the animals. Correct immediately.

3.75(c)(1)

Housing facilities, general.

There were two ring tailed lemur enclosures with perches, den boxes and other furniture that had been soiled. The furniture and other structures in their enclosures must be constructed in a manner and made in a material that allows them to be readily cleaned and sanitized, or removed or replaced when worn or soiled to promote cleanliness and prevent disease. Correct by August 8, 2021.

This inspection and exit interview were conducted with the facility representative.
