Type: ROUTINE INSPECTION
Date: 14-FEB-2024

3.153(a)(2)

Primary enclosures.

The large aviary housing peafowl and waterfowl does not have appropriate perching for the peafowl who are known to go high and roost at night. There is an old scaffold in the enclosure that is used by the turkey but this is not species appropriate and could cause potential harm. Perching that is species appropriate must be made available that is sufficient in number, size, strength and texture to comfortably hold all the birds at the same time. This needs to be addressed for the welfare of the birds.

Correct by: March 14, 2024

3.154

Environment enhancement to promote psychological well-being.

The facility does not have an environmental enhancement plan in place to promote the overall psychological well-being of the birds at the facility. Exhibitors must develop, document and follow a species appropriate plan for the environmental enhancement to promote the psychological well-being of the birds that is within industry standards and approved by the attending veterinarian. This plan must be made available for future inspections.

Correct by: March 14, 2024

3.158(c)

Cleaning, sanitization, housekeeping, and pest control.

Areas around the bird enclosures and directly in the large aviary are cluttered with items that do not promote good housekeeping practices. In the large aviary, there is an old metal chair, old wire mesh enclosures and miscellaneous stored items that need to be removed from the primary enclosure for the safety of the birds. Additionally, the area between the raptors is filled with miscellaneous items (transport crates, broken shovel, buckets, wires, building materials, etc). These areas need to be kept clean and in good repair to promote good housekeeping practices around the birds and facility.
