Customer ID: 11169  
Certificate: 43-A-4973  
Site: 001  
KIMBERLY COLEMAN

Type: ROUTINE INSPECTION  
Date: 30-JUL-2015

### 2.40(b)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There was an adult, female Yorkshire Terrier (#0A0 178 4873) that was slightly squinting her right eye which was nearly covered in a crusted, yellow discharge. The licensee stated she had not noticed the dog had a problem with its eye until it was pointed out by the inspector. The licensee wiped the crusted material from the dog's eye and applied an antibiotic ointment (Terramycin). The licensee stated that's what she was told to do by her veterinarian for eye problems. However, there was nothing included in the Program of Veterinary Care (at the time of inspection) which stated those instructions by the veterinarian. Squinting and excessive discharge could indicate that the dog may have an eye condition which could be painful or quickly get worse. Numerous different things can cause these types of clinical signs and a proper diagnosis is required to determine the appropriate medication. The licensee must have this animal examined by a licensed veterinarian in order to ensure that an accurate diagnosis is obtained and an appropriate treatment plan is developed and followed. The licensee must document this information and make it available to the inspector upon request. The licensee must ensure that all animals receive adequate veterinary care at all times.

TO BE CORRECTED BY: 2 August 2015. The licensee acknowledged this date during the exit interview.

### 2.75(a)(1)(6)

#### RECORDS: DEALERS AND EXHIBITORS.

There was an adult, female Yorkshire Terrier with the microchip number: 0A0 178 4873. This identification (ID) number wasn't listed as the ID number for any of the dogs on the list of dogs on hand. Multiple attempts were made to determine if there was a second microchip in the dog but none was ever recognized by the licensee's scanner. A call to the microchip company revealed that the chip was purchased in January 2014 but was never registered. Complete and accurate records must be kept in order to ensure that each animal's identity can be known with certainty and to facilitate tracking/tracing of animals. The licensee must record an accurate ID number for this dog on the list of dogs on hand and ensure that all other dogs at the facility have accurately recorded numbers.

TO BE CORRECTED BY: 31 July 2015. The licensee acknowledged the correction date during the exit interview.

## Inspection Report

---

### 3.1(c)(3)

#### HOUSING FACILITIES, GENERAL.

There was a general lack of cleaning in a couple of the buildings housing the dogs. The grooming/treatment room had dirt, dust, and debris in two of the corners of the room which were only a few feet from where several animals were being temporarily housed. The window adjacent to the grooming/treatment table had an accumulation of dead flies in front of it which measured nearly an inch deep. There were cracks and tears in a couple spots on the linoleum floors where waste, hair, and debris was accumulating. Although the dogs aren't coming into direct contact with these areas, unsanitary conditions in the buildings where they are housed increases the risk of disease hazards. The licensee must ensure that all surfaces of the housing facilities (including the areas that do not come in contact with the dogs) are cleaned and sanitized when necessary to satisfy generally accepted husbandry standards and practices.

TO BE CORRECTED BY: 30 August 2015

The inspection and a verbal exit interview were conducted by Dr. Owens (VMO) and Dr. Leisner (VMO) with the licensee. The licensee was given all three correction dates during the exit interview and she acknowledged those dates.

#### Additional Inspectors

Leisner Erika, Veterinary Medical Officer
