Site: 001

SARASOTA JUNGLE GARDENS
INC

Type: ROUTINE INSPECTION

Date: 22-MAY-2024

3.75(a)

Housing facilities, general.

The door at the back of the eastern ring-tailed lemur enclosure is in disrepair. The frame of the door is made of metal tubing and PVC pipe. The bottom left section of the vertical pipe is broken approximately 3 inches from the bottom.

Enclosures that are not structurally sound may allow the animals within to escape or allow other animals to enter the enclosure. These conditions might also lead to injury of the animals.

Housing facilities for nonhuman primates must be kept in good repair, and they must protect the animals from injury, contain the animals securely, and restrict other animals from entering. To be corrected by June 5, 2024.

3.127(d)

Facilities, outdoor.

A section of the perimeter fence failed to maintain the 3-foot minimum distance from a primary enclosure. Along the western side of the petting zoo is a newly constructed section of the perimeter fence. This fence section maintained an average distance of approximately 24 inches from the enclosure but approached as close as 15 inches in some areas. There was no written approval for this variance from the regulation.

The perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility.

Perimeter fences must be of sufficient distance from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence. Such fences less than 3 feet in distance from the primary enclosure must be approved in writing by the Administrator. To be corrected by July 3, 2024.

3.150(c)(3)

Facilities, general.

Inspection Report

Some of the bird perches were damaged. A perch holding a hyacinth macaw had a central pole approximately 4" X 4" in diameter. This pole was covered by a layer of clear, hard acrylic or plastic. The bottom section of the plastic like substance was broken, leaving jagged edges near some of the lower bird perches. There were two other perches observed with similar damage.

Structures in bird enclosures that are not kept in good repair can lead to harm or injury to the birds.

Interior surfaces and surfaces that come in contact with birds must be free of jagged edges or sharp points that could injure the birds. To be corrected by June 5, 2024.

3.154

Environment enhancement to promote psychological well-being.

At the time of inspection, there was no documented program of environmental enhancement for the birds housed at the facility.

An adequate environmental enhancement program is essential in promoting the psychological well-being of birds.

Dealers, Exhibitors, and research facilities must develop, document, and follow an appropriate plan for environment enhancement adequate to promote the psychological well-being of birds, it must be in accordance with the currently accepted professional standards and as directed by the attending veterinarian. To be corrected by June 5, 2024.

This inspection and exit interview were conducted with facility representatives.
