JASON & ASHLAE SIMMONS

Type: ROUTINE INSPECTION
Date: 15-JUL-2014

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Sec. 2.40 Attending veterinarian and adequate veterinary care (dealers and exhibitors).

- (b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include:
(2) The use of appropriate methods...

***In the outdoor facility, there was an adult female Rottweiler identified as Natasha that had limited weight bearing on her right front leg. The facility representative stated that it was not like that yesterday and that there had been some compatibility issue with the two young Akitas in the next enclosure. They had not seen any compatibility issues for sure with the Rottweilers, yet do not know of any other reason that this dog would be injured. Limited weight bearing or non-weight bearing limbs are an indication of discomfort, pain, injury or disease and increase the risks of further deterioration if not properly diagnosed and treated or left if left unattended.

***There were two adult Mastiffs, one blue female identified as Betty and a fawn male identified as #9810200019116 that had loose stool inside their primary enclosures. The facility representative stated that their stool has been this way for a long time, that this situation had been discussed with the attending veterinarian some time in the past and that the dogs are dewormed on a regular basis. Loose stools can be an indication of a gastrointestinal problem, stress or discomfort. Left unattended any of these issues could worsen the health of the animal.

The licensee understands that the Rottweiler identified as Natasha must be evaluated by a licensed veterinarian by COB July 17, 2014 and follow any treatment plans. The licensee must contact a licensed veterinarian concerning the loose stools in the two Mastiffs, follow any treatment plans and assure that all regulated animals are provided with adequate veterinary care at all times as required.

3.11(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

- Sec. 3.11 Cleaning, sanitization, housekeeping, and pest control.
(d) Pest control.

Inspection Report

***In the outdoor facility, there were certain areas that contained an excessive amount of flies. Most of these were seen on the back row on the south end. Fly traps and strips had been recently placed in the area, yet there were still an abundance of flies. Pests carry diseases which increases the risks of contamination to the dogs, water and food supply. The licensee must assure that measures are taken to reduce the flies and any other pests in the facility as required.

To be corrected by 7/22/14.

This inspection began at 0915.

The inspection and exit conference were conducted with the facility representative.

End of report.
