Type: ROUTINE INSPECTION
Date: 11-MAY-2023

3.125(a)

Repeat

Facilities, general.

Some areas of enclosures were in need of repair/maintenance:

-The red foxes have dug out the back area of their enclosure and exposed some wire where they are digging. Exposed wire in digging areas could cause injury to the foxes. While digging is a species-typical behavior for foxes and can be good enrichment, ensure that areas they dig in are routinely maintained (such as regular filling in) to protect them from contacting wire in areas where digging (Facility reports the foxes have a new enclosure that they will be moved to this week).

-Some panel points are in an area where a male tiger could contact them next to a shelter. Panel points could injure the tiger. Ensure that the enclosure is free from any points that the tiger could contact.

-Some scrap metal in the aoudad pen has sharp/rough edges. The aoudads could possibly injure themselves on scrap metal with rough edges. Ensure that scrap metal is removed and there are no sharp/rough edges in their enclosure.

3.131(d)

Sanitation.

A live mouse was seen by the food prep table and mineral storage area and mouse droppings were seen in some areas along the wall of the food storage building. Most animal feed was in rodent-proof containers, however, the presence of

Inspection Report

rodents in the food prep and storage area increases the risk of feed contamination. Contaminated feed could make animals sick. Ensure that a safe and effective program of pest control is in place to control pests including insects, ectoparasites, avian and mammalian pests (including rats and mice).

***Correct by 5/19/2023.

This inspection and exit interview were conducted with facility representatives.
