FRIENDS OF ROOS-N-MORE, INC.

Type: ROUTINE INSPECTION
Date: 30-APR-2015

3.125(a)

FACILITIES, GENERAL.

-An outdoor enclosure for caviae and a porcupine had a chain-link fence gate with several protruding wires and broken, splintered bamboo sticks.

-Kangaroo Yard: There was wire material with exposed and protruding sharp ends loosely wrapped around the base of a tree.

The presence of protruding or sharp wires and sticks from fencing material may lead to animals being trapped or injured. A timely system of identification, repair and maintenance must be in place to protect the animals and to prevent injury.

Correct by 05/11/2015

3.127(d)

FACILITIES, OUTDOOR.

The following outdoor, primary enclosures utilize the facility's 6ft, concrete, block wall perimeter fence as a part of its primary enclosure: Camel pen, Asian, Small-clawed Otter enclosure, and Kangaroo pen/yard. The perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from having contact with the animals, and so it can function as a secondary containment system. It must be of sufficient distance from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence. Fences less than 3 feet in distance from the primary enclosure must be approved in writing by the Administrator.

Correct by 12/04/2015

3.131(a) REPEAT

SANITATION.

-The pool in the enclosure housing 4 Asian, Small-clawed Otters was dirty. The walls and surface of the pool has an accumulation of green algae, dirt and debris.

Inspection Report

-Raccoon enclosure: An elevated wooden platform next to the nesting box had an excessive buildup of excreta and other waste material.

-Tamandua enclosure: An ice chest/cooler used as a shelter box and affixed to an elevated wooden platform had an excessive buildup of excreta, dirt and debris.

Dirty pools/water and the buildup of excreta in animal enclosures possess a health risk to the animals. Primary enclosures shall be cleaned as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors. The cleaning schedule of all enclosures should be more timely and effective.

ORIGINAL CORRECTION DATE OF 02/21/2014.

3.131(c)

SANITATION.

-An overgrowth of weeds and grass was present in the immediate area of the Caracals ' primary enclosures and also in a large section of the yard near these enclosures.

- Kitchen area had an accumulation of food crumbs on counter tops and dirt, dust on floors and cabinets. The laundry room and enrichment storage area were kept untidy with a general accumulation of clutter and debris. An employee area/room adjacent to the kitchen had a buildup of dust, debris on the walls, floor and table tops as well as clutter of miscellaneous items.

Premises including buildings and surrounding grounds must be kept clean, free of clutter and in good repair in order to protect the health and well-being of the animals, to prevent the harborage of vermin and pests, and to facilitate the prescribed husbandry practices. A system of maintaining effective housekeeping practices must be in place.

Correct by 05/11/2015

3.131(d)

SANITATION.

There were many flies present throughout the facility affecting several animal enclosures. No functional flytraps or other fly control products/methods were present at time of inspection. Control of insects and other pests is needed to reduce contamination and potential disease hazards and to promote the health and well-being of the animals. An effective program of pest control must be established and maintained.

Correct by 05/07/2015

Exit interview conducted with facility representative.
