Type: ROUTINE INSPECTION
Date: 25-FEB-2015

3.56(a)(1)

SANITATION.

There was a moderate amount of rabbit hair adhered to the mesh of several of the rabbit cages and to the gate to the cavy pen. It was explained that the hair is routinely removed, and that this had last been done about a month ago. Primary enclosures should be kept reasonably free of hair, excreta and other debris by periodic cleaning for the health and comfort of the animal. Fine hair can also attract dirt and dust which may harbor pathogens that can cause illness in animals.

Correct by 3/7/2015

The inspection and exit briefing were conducted with the Licensee.
