

## Inspection Report

Mc Grath Family Farms  
1012 W Ventura Blvd.  
Camarillo, CA 91360

Customer ID: **328247**  
Certificate: **93-C-1015**  
Site: 001  
Mc Grath Family Farms

Type: ROUTINE INSPECTION  
Date: 16-JUL-2014

### 3.50(a)

#### FACILITIES, GENERAL.

There was an opening in the bottom left corner of a rabbit cage which had loose wiring, leaving a gap in the enclosure and exposing rabbits to wire ends. The wiring in the cage should be repaired and maintenance problems should be identified and fixed in a timely manner to protect the animals from injury.

Correct by 07/29/14

### 3.54(a)

#### FEEDING.

Diet as observed during inspection contains a large percentage of carrots. While carrots have some nutritional value, they do not provide sufficient nutritive value for the rabbits. Feeding excess amounts of one diet item can result in preferential feeding, with the rabbits failing to consume the balanced rabbit pellets, which are necessary to ensure normal daily requirements are met. Diet should be balanced to ensure animals are consuming sufficient nutritive value.

Correct by 07/29/14

### 3.129(a)

#### FEEDING.

In a pen housing two sheep, there was a food receptacle which contained rotting, leafy greens. A system of replacing uneaten food from the sheep pen in a timely manner must be implemented to ensure food is wholesome and has adequate nutritive value to maintain animals in good health.

Correct by close of business 07/23/14

### 3.130

#### WATERING.

Prepared By: TYLER FIELDS, D V M USDA, APHIS, Animal Care

## Inspection Report

---

Sheep enclosure: The size of the water receptacle is not adequate for the species housed. Water in the small shallow dishes could heat up quickly, reducing potability. Additionally, under heat or stress conditions, the animals could quickly consume the small amount of water available. There is no dedicated animal keeper in the area to monitor consumption. Watering must be done in a way to ensure the health and comfort of the animals.

Correct by close of business 07/23/14

### 3.131(a)

#### **SANITATION.**

In a pen housing two pigs, there was a buildup of excreta which created a bad odor and an increase in the amount of flies in the area. Excreta should be removed as often as necessary to prevent contamination of the animals contained and to reduce disease hazards and reduce odors. The cleaning schedule of the pig pen should be more effective to prevent the buildup of excreta.

Correct by 07/24/14

Exit interview was completed with facility representative
