Type: ROUTINE INSPECTION
Date: 19-JAN-2024

3.75(c)(3)

Housing facilities, general.

The indoor enclosure housing a ring-tailed lemur contains an excessive accumulation of crushed animal feces, urine, food particles, hair, and organic material on the enclosure floor, climbing structures, and wire mesh caging. Not maintaining appropriate levels of cleanliness in areas where non-human primates come in contact can result in an excessive build-up of materials, which can increase the disease risk for the animals contained within.

Per the regulations, hard surfaces with which nonhuman primates come in contact must be spot-cleaned daily and sanitized in accordance with § 3.84 of this subpart to prevent accumulation of excreta or disease hazards. If the species scent mark, the surfaces must be sanitized or replaced at regular intervals as determined by the attending veterinarian in accordance with generally accepted professional and husbandry practices. Correction date: January 23, 2024.

3.84(d)

Cleaning, sanitization, housekeeping, and pest control.

In the enclosure housing a male lemur, there was an excessive amount of fruit flies observed. Pests can transmit disease, contaminate food and surfaces, and can harm animals. An effective program for control of insects, external parasites affecting nonhuman primates, and birds and mammals that are pests, must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas. Correction date: January 29, 2024

3.131(a)

Repeat

Sanitation.

The indoor enclosure housing two racoons has an excessive accumulation of feces, urine and brown organic material on the enclosure floor, climbing structures and wire mesh caging. Failure to clean excreta from primary enclosures as often as necessary can lead to disease and contribute to odors. The licensee must ensure the primary enclosure is cleaned and excreta removed on a routine basis and as often as necessary to minimize disease hazards and reduce odors.

This inspection and exit interview were conducted with a facility representative.
