Type: ROUTINE INSPECTION
Date: 23-JUN-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(b) Maintain a program of adequate veterinary care that include:

(2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries.

A male Maltese, microchip #100278539, "Tornado", was observed with a dirty face and a dark colored discharge from his eyes. Closer observation showed that this dog has reddening of the gum line above the canine tooth and some of the upper front teeth on the left side. These teeth were mostly covered with a dark colored substance. On the upper right side there is reddening of the gum line above the cheek teeth and there are also small pockets of whitish colored creamy substance at the gum line of these teeth. These teeth were also mostly covered with a light brown to tan colored substance. As the inspectors were observing the mouth of this dog he was producing bubbles of a clear discharge from his nose. These signs are consistent with the presence of dental disease, can be painful, lead to the development of other health problems, and can inhibit the ability of the animal to eat normally. The licensee must have this animal examined by a licensed veterinarian in order to ensure that an accurate diagnosis is obtained and that an appropriate treatment plan is developed and followed. The licensee must document the outcome of this consultation and make it available to the inspector upon request. The licensee must establish and maintain a program of veterinary care that includes the use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries at all times.

To be corrected by: 26 June 14

Inspection and exit interview conducted with the licensee.
