Type: ROUTINE INSPECTION
Date: 13-FEB-2018

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A white male chinchilla's left front leg that had previously been evaluated by the attending veterinarian (AV) with a plan of monitoring it for changes was observed today to have changes that need to be re-evaluated by the AV. The area of its left front leg had a hard, white, pointed protrusion sticking out of a swollen crusted area. Lightly touching the crusted area confirmed that the area was swollen around the protrusion and there was some pale discharge that came out from underneath the crusted material. The swelling and pale discharge are signs of an active disease process that needs to be evaluated by the attending veterinarian for treatment. To prevent pain and a worsening condition in this chinchilla, the facility must ensure that the chinchilla is re-evaluated by a licensed veterinarian and follow the recommended treatment.

To be corrected: 2-17-18

3.125(a) REPEAT

FACILITIES, GENERAL.

In the goat enclosure, two areas of chain link fence are unraveled exposing sharp points to the animals. A male black and white goat was observed working his horns in and out of the fence near these points during the inspection. The sharp points could potentially injure the animals.

Repair or replace the damaged areas of fence to provide for the health and well-being of the animals.

3.127(d)

FACILITIES, OUTDOOR.

The west perimeter fence is in disrepair. The damaged section of fence, approximately six feet in width, acts as a secondary containment for the three coyotes and and single camel. The damaged fence could also potentially allow unauthorized persons or wild animals to enter the facility.

Repair or replace the damaged section of perimeter fence.
