ADVENTURE GOLF AT REMPELS
GROVE LLC

Type: ROUTINE INSPECTION

Date: 24-FEB-2023

2.131(c)(1)

Handling of animals.

The primary enclosure fence-line that houses domestic goats and fallow deer does not have any public barriers present. Upon arrival to the facility 2 groups of people were observed by the inspector petting goats through this fence. The public feeding station does have barriers present, but a young goat was observed on the public side of the barrier being touched and fed by patrons. Failure to provide public barriers increases the risk of harm to both the animals and the public. The licensee must ensure that animals are handled so there is minimal risk of harm to the animals and the public. Additionally, there must be sufficient distance between and/or barriers between the animals and the general viewing public so as to assure the safety of the animals and the public. Correct by, 15-March-2023.

2.131(d)(2)

Handling of animals.

The facility did not have any readily identifiable employees or attendants present during periods of public contact. The inspector observed two groups of people touching and feeding goats through the fence-line of a primary enclosure that housed domestic goats and fallow deer. In the feeding station a young goat also was being fed and touched when it crossed the public barrier in the feeding station. Failure to have a knowledgeable and readily identifiable employee present during public contact creates a risk to both the animals and the public. The licensee must ensure that a

Inspection Report

responsible, knowledgeable, and readily identifiable employee is present at all times during periods of public contact.

Correct by, 04-March-2023.

3.125(a)

Facilities, general.

An enclosure housing 16 fallow deer and 30 domestic goats has multiple areas of their primary enclosure fence that require repair. There is an area on the back side of the fence that the wire fencing is sagging approximately a foot from the top support beam. On the bottom of the same section, wire fencing has been pulled away and wood has been added to cover the area. Another part of the fence has a severely bent top support from a tree falling on it making the top of the fence closer to the ground than originally intended. Failure to maintain primary enclosure fencing can allow for animal entrapment in loose areas, sharp points from broken or improperly secured wire, and the possibility for animal escape and/or outside animal entry. The licensee must ensure that the housing facilities are constructed of such material and of such strength as appropriate for the animals involved. Additionally, the housing facilities shall be maintained in good repair to protect the animals from injury and to safely contain the animals. Correct by, 24-March-2023.

This inspection and exit interview were conducted with the licensee.
