Certificate: **41-B-0254**  
Site: 001  
GO AQUATICS LLC

Type: ROUTINE INSPECTION  
Date: 28-MAR-2016

### 2.40(a)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Appropriate authority.

The licensee acknowledged using CO2 to euthanize animals. This method is not listed and approved by the attending veterinarian on the written Program of Veterinary Care plan. Since there is no written documentation regarding this method, it can not be determined whether the attending veterinarian has knowledge of the licensee using this method of euthanasia. This does not ensure that the attending veterinarian has been given appropriate authority for the provisions of adequate veterinary care including euthanasia. This may lead to failure to deliver adequate veterinary care to the animals or cause pain, distress or negative effects to the animal during euthanasia. The licensee must consult with the attending veterinarian regarding euthanasia methods to ensure they are appropriate and that the attending veterinarian has been given appropriate authority and oversight over the care of the animals. Euthanasia methods must be included in writing as part of the written Program of Veterinary Care and approved by the attending veterinarian. Correct by April 12, 2016.

### 2.40(b)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Adequate veterinary care.

The male African Soft-furred Rat must be evaluated by the attending veterinarian. There are several small raised lumps throughout the length of its tail, a scabby sore below the left eye and the left eye was unable to open due to another growth near the eye. This health issue has not been addressed and the animal has not been seen by a veterinarian. Lack of veterinary care could lead to a worsened health condition and discomfort to the animal. The licensee must have this animal evaluated by a veterinarian for diagnosis and recommended treatment. Documentation must be maintained regarding this veterinary evaluation and kept by the licensee for review by APHIS officials on subsequent inspections. Correct by April 5, 2016.

### 3.28(c)(2)(2)

#### PRIMARY ENCLOSURES.

## Inspection Report

---

Space requirements - hamsters.

The plastic containers used to house 47 dwarf hamsters measure 5.5 inches tall. With the shavings present in the containers, the dwarf hamsters are provided with varied interior heights of between 3-4 inches. Primary enclosures housing hamsters must have a minimum interior height of at least 6 inches. Lack of interior height could affect the comfort of the animals and limit or prevent vertical postural adjustments of the animal. Provide hamsters with a minimum of 6 inches of interior height. Correct by April 12, 2016.

Inspection and exit interview conducted with the owner.
