Arlington, WA 98223

Customer ID: **503797**  
Certificate: **91-C-0151**  
Site: 001  
Ray Strom

Type: ROUTINE INSPECTION  
Date: 22-AUG-2024

---

### 2.131(d)(2) Repeat

#### Handling of animals.

Only one attendant was present for a public tour with over 25 guests that were allowed to interact with the animals. The visitors walked through the animal enclosures with kangaroos, wallabies, and alpacas and were encouraged to feed and pet several of these animals.

A responsible, knowledgeable, and readily identifiable employee or attendant must be present at all times during periods of public contact. The facility must provide an adequate number of attendants to ensure any interactions with the animals are conducted in a safe manner for both the animals and the public.

### 3.125(a) Repeat

#### Facilities, general.

A wooden fence post in the southwestern side of the kangaroo enclosure is leaning and pulling on the wire fencing. In addition, the wire fencing in the emu enclosure near the water receptacle has numerous pieces of broken wire that are pointing inward into the enclosure.

Unstable, bent or broken fencing may cause entrapment or other injuries to the animals. Maintenance issues must be identified and addressed in a timely manner to keep the facility structurally sound and in good repair, safeguard the animals from injury and to contain the animals.

### 3.125(c) Repeat

#### Facilities, general.

The main food storage room has large metal cans of pelleted feed, and one of the lids is dented and no longer appears to fit the can. In addition, the room has empty feed bags, debris, and clutter noted around the cans.

Food must be stored properly to prevent contamination, deterioration and spoilage. All open supplies of food must be stored in leak-proof containers with a lid. The food storage room also requires cleaning and organization.

### 3.153(a)(1)(ix) Repeat

## Inspection Report

---

### Primary enclosures.

The cardboard box used as a perch in the kookaburra enclosure has a thick coating of dried fecal material present. The bird cannot use it without coming in contact with the excreta. In addition, the metal surfaces at the base of the bird's enclosure have dried fecal material and debris present and should be cleaned.

The bird's enclosure must be cleaned and sanitized as often as necessary to prevent the accumulation of dirt, debris, food waste, excreta, and other disease hazards. The licensee must ensure that all surfaces in contact with the bird may be readily cleaned and/or sanitized or be replaced when worn or soiled.

This inspection and exit interview were conducted with the licensee.
