Site: 001
UNIVERSITY OF VIRGINIA

Type: FOCUSED INSPECTION
Date: 15-MAY-2023

3.125(a)

Facilities, general.

One tree shrew cage, housing a pair of breeders, has a section of wire paneling broken on the right side. The wire mesh has broken apart from the surrounding mesh and can be manually separated from the remaining wire wall, creating a small gap. The broken flap is approximately 0.75 inches x 1.25 inches and sits flush with the rest of the cage on observation. Areas of broken metal can create sharp edges and injure, entrap, or allow an animal to escape. Correct by May 18, 2023 by ensuring all facilities are structurally sound and maintained in good repair to protect the animals from injury and to contain the animals. The facility removed the animals from the enclosure the same day.

This inspection and exit interview were conducted with facility representatives.
