Flamingo Gardens
3750 South Flamingo Road
Davie, FL 33330

Customer ID: **3054**
Certificate: **58-C-0802**
Site: 001
FLAMINGO GARDENS

Type: ROUTINE INSPECTION
Date: 23-OCT-2024

3.150(a)

Facilities, general.

The walk-through aviary containing pelicans, wood storks, Ibises, night herons and various species of ducks contains numerous holes in the rigid wire mesh surrounding the aviary. There are areas at the top of the enclosure where at least four large openings are present in the wire mesh that need repair. A facility representative stated that wild crows had chewed and broken the wires, creating these holes to enter the enclosure. Openings in the wire mesh of the enclosure may result in bird escapes, injuries or death. The facility must ensure bird enclosures are maintained in good repair, protect the birds from injury, contain the birds, and restrict other animals from entering who may negatively affect the welfare of the birds within. Correct by November 20, 2024.

3.152(b)

Facilities, outdoor

At the time of inspection, most of the outdoor bird enclosures lack appropriate shelter from wind and/or precipitation. Each affected enclosure has a roofed area that lacks adequate sides to provide an effective windbreak.

** The enclosure housing four blue and gold macaws, a hyacinth macaw, and an umbrella cockatoo lacks adequate shelter from wind and precipitation.

** The enclosure housing two black vultures and two turkey vultures has roofed areas but lacks adequate shelter from wind and precipitation.

** One enclosure housing a bald eagle and another housing a black vulture did not provide any opportunities to inhibit wind entering the exhibit.

** The enclosure housing an umbrella cockatoo has a roof but lacks adequate shelter from wind and precipitation.

** The enclosure that houses two military macaws, a ruby macaw, and a Major Mitchell's cockatoo lacks adequate shelter from wind and precipitation.

** The enclosure housing two keel-billed toucans lacks adequate shelter from wind and precipitation.

Inadequate shelter from wind and precipitation may result in illness, discomfort, or distress to the birds, and may have a negative impact on their physical condition and well-being. All outdoor housing facilities for birds must provide enough shelter that is large enough to comfortably contain all the birds at one time and prevent their discomfort from direct sunlight, precipitation, or wind. Correct by January 23, 2025.

Inspection Report

3.154

Environment enhancement to promote psychological well-being.

The facility does not have an environmental enhancement plan for birds. This plan is necessary to ensure the psychological well-being and health of the animals. The facility must develop, document, and follow a species-appropriate plan for environment enhancement adequate to promote the psychological well-being of birds. The plan must be approved by the attending veterinarian and must be in accordance with the regulations and with currently accepted professional standards as cited in appropriate professional journals or reference guides. This plan must be made available to APHIS upon request. Correct by November 20,2024.

This inspection and exit interview were conducted with facility representatives.
