Type: ROUTINE INSPECTION
Date: 28-SEP-2017

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

****Otis (m/c0071B72F7) a male fawn Pug, was very thin. His ribs, backbone, hip bones and shoulders were easily observed and there was a very defined abdominal tuck. Both eyes are crusted with a dry discharge and previous veterinary notes stated that the dog was blind. The owner stated that the dog had lost weight before and was treated with dewormer and different dog food and that was her plan now. There was no consultation with a veterinarian to establish a diagnosis or to confirm that this was the correct treatment for this dog. Eye conditions can be uncomfortable or painful and the discharges can attract flies and cause the condition to worsen. Poor body condition can be the result of parasites, inadequate nutrition, or an underlying medical condition. The dog must be evaluated by a veterinarian within 2 days of this inspection, to know with certainty the problem and the correct treatment. Documentation of the evaluation, recommended treatment and delivered treatments must be available to APHIS officials.

The veterinarian was called during the inspection for an appointment for that same evening.

Correction date: 1 Oct, 2017

This inspection and exit interview were conducted with a facility representative.
