Certificate: 23-C-0039

Site: 001

ANIMALAND ZOOLOGICAL PARK

Type: ROUTINE INSPECTION

Date: 07-OCT-2014

### 3.127(c)

#### FACILITIES, OUTDOOR.

Section 3.127(c) Drainage: The following areas have an accumulation of water and mud:

- 1) There is a large muddy area with puddles of water by the water receptacle in the enclosure housing three bison.
- 2) There is a large muddy area with puddles of water by the water receptacle in the enclosure housing two alpaca.

The animals have to walk through the mud to get to the water receptacle. Walking through mud and water can cause hoof problems such as foot rot. The mud and standing water can also attract insects which may transmit diseases and/or annoy the animals. The drainage must be improved to rapidly eliminate excess water to prevent muddy conditions and to protect the health of the animals.

Correct both items by November 9, 2014.

### 3.131(c)

#### SANITATION.

Section 3.131(c) Housekeeping: The cloth covering the back fence of the enclosure housing one wallaby has large horizontal rips with holes near the bottom of the fence. The wallaby was laying down in front of the back fence with the torn cloth. The wallaby may get a body part caught in the torn cloth moving along the back fence or become tangled in the ripped cloth if it sticks its head through a hole in the cloth to look out through the fence. The torn cloth on the back fence of the wallaby enclosure must be removed or repaired to prevent injury to the wallaby.

Correct by October 9, 2014.

Note: The male rhesus cited on the April 22, 2014 inspection report was seen by the attending veterinarian and is on treatment. Exit briefing was conducted with the owners.
