Type: ROUTINE INSPECTION
Date: 30-SEP-2015

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Adult, male Chihuahua with chip number 016 504 531 has a buildup of brown material (calculus) on his remaining cheek teeth. The right upper cheek tooth is loose and has a creamy white material along the reddened gum line. The left upper cheek tooth is also loose. These symptoms are consistent with dental disease. Dental disease can cause damage to the gum tissue and tooth and mouth structures and is painful. It can impact the ability of the dog to eat normally, affecting the overall health of the animal. The animal listed above must be examined by a licensed veterinarian in order to ensure that an accurate diagnosis is obtained and an appropriate treatment plan is developed and followed. This information, including the diagnosis, treatment and resolution of the condition, must be documented and made available to the inspector upon request.

Adult, female Shih Tzu with chip number OAO2366961 has matted fur. The entire back, top of the rump, and all four limbs have mats that are tight against the skin. Matted fur can lead to skin infections and is painful. In addition, matted fur does not provide complete protection against the elements. The licensee must remove the matted fur of this dog. As part of the facility's program of veterinary care, the licensee must develop and follow a program of coat maintenance at whatever frequency necessary to ensure that matted fur is removed on a regular basis.

Adult, male Chihuahua with chip number OAO1662307 has overgrown toe nails on both front feet. The nails are starting to curl outward as they contact the ground. Long toenails can interfere with the dog's gait and can be uncomfortable. The licensee must trim this dog's toenails. As a part of the facility's program of veterinary care, the licensee must develop and follow a program of toenail maintenance at to ensure that toenails are kept at a comfortable length.

2.50(d)

TIME AND METHOD OF IDENTIFICATION.

There are at least 9 weaned puppies from different litters that are comingled in multiple enclosures that are not officially identified. Proper identification allows for the tracking and identification of all animals. The licensee must officially identify weaned puppies if they are not maintained as separate litters and are comingled with puppies from other litters. Correct by 7 October 2015.

Prepared By: KENDALL LUNDY, A C I USDA, APHIS, Animal Care

Inspection Report

2.75(a)(1)

RECORDS: DEALERS AND EXHIBITORS.

There are at least 20 litters of puppies that do not have inventory records for them. Complete and accurate inventory records of all puppies and adults in the kennel allow for their tracking and identification. The licensee must make, keep and maintain complete records for all puppies and adults in the kennel. Correct by 7 October 2015.

3.4(a)(1)(3)

OUTDOOR HOUSING FACILITIES.

There are least 16 litters of puppies that are currently housed in the outdoor housing portion of this facility. This practice has not been specifically approved by the attending veterinarian. Having the attending veterinarian approves this practice ensure that housing facilities are appropriate for the age of animals. The licensee must have the attending veterinarian document in writing approval for housing young dogs in outdoor housing facilities. Correct by 14 October 2015.

3.9(b) REPEAT

FEEDING.

There are six plastic food receptacles in the indoor housing area with chewed edges that are deeply pitted and trapping dirt. The chewed edges of the food receptacles show decrease in durability and are difficult to clean and sanitize. When surfaces are not sanitized they can play a role in disease transmission. When food receptacles become worn or chewed to the point that they cannot be sanitized in accordance with 3.11 (b), they must be replaced. Licensee must provide durable food receptacles without chewed edges that are easily cleaned and sanitized.

This routine inspection and exit interview were conducted with a facility representative, Dr. Margaret Shaver, VMO and Kendall Lundy, ACI.
