Fort Madison, IA 52627

Customer ID: **5299**  
Certificate: **42-A-1285**  
Site: 001  
DENISE KROGMEIER

Type: ROUTINE INSPECTION  
Date: 23-OCT-2017

### 2.40(b)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Male chocolate/tan Dachshund (microchip #105-560-337) has a buildup of brown tartar on the teeth. The majority of the surface of the upper right and left canine teeth are covered by the tartar. The entire surface of the upper left cheek teeth are also covered in a thick buildup of grey/brown tartar. Grey colored material is located along the gum line at the top of both canine teeth and upper left cheek teeth. The gums appear moderately reddened. This dog has large rope-like mats of hair attached to both ears. The mats are tight against the skin and are thick and solid to the touch with round clumps of brown debris trapped within them.

Male black/tan Dachshund (microchip #0A01480502) has a buildup of brown tartar on the teeth. The entire surface of the upper right cheek teeth and nearly the entire surface of the upper right canine tooth are covered in a heavy buildup of dark brown tartar. A line of thick, grey material is located along the gum line above the upper right teeth. Nearly the entire surface of the upper left canine tooth and upper left cheek teeth are covered in a buildup of brown tartar. The gums are moderately reddened.

The licensee stated that the dogs had tartar removed from their teeth 6 months ago by a dog groomer.

Male Shih tzu (microchip #105568855) has an abnormal appearance to the right eye. The eye is cloudy and a brown, dry, crusty material is attached to the hair along the upper and lower eyelids. A yellow discharge is also located along the inner and outer corner of the eye. The white of the eye is slightly reddened. The dog is not currently receiving any treatment for the eye, but the licensee put some ointment in the dog's eye at the time of the inspection.

Poor eye and dental health could cause pain and discomfort to the dog, as well as lead to further health issues. The above mentioned dogs must be evaluated by a licensed veterinarian for a proper diagnosis and to establish an effective treatment plan. The licensee must ensure that the facility's dental plan maintains the dog's teeth in a healthy condition.

Correction date: A verbal correction date of October 27, 2017 was given at the time of the inspection.

Prepared By: MAXWELL KELLY, A C I USDA, APHIS, Animal Care

Date:  
24-OCT-2017

## Inspection Report

---

Matted hair coats could cause pain and discomfort to the dog and could have a negative impact on the animal's well-being. The licensee must remove the matted hair from the ears of male chocolate/tan Dachshund (microchip #105-560-337). The licensee must ensure that the facility's grooming plan keeps the hair coats of all dogs free from matting and debris.

Correction date: The licensee removed the matted hair from the dog's ears at the time of the inspection.

Expired medical materials are found in the refrigerator and storage area within the kennel. The following materials were found expired: Pyrantel Pamoate-expired May 2015, Gentamicin Sulfate-expired March 2013, Quickderm Wound Ointment-expired July 2017, Neomycin Ophthalmic Solution-expired March 2008, Veterinary Lactated Ringer's Injection-expired November 2016. Expired medical materials may lose their effectiveness, and if they are used to treat an animal the health of that animal could suffer.

The licensee must either dispose of the expired medical material or clearly label it expired and it is not to be used on regulated animals. The licensee must ensure that all medical materials used for the dogs is not expired in order to support their health and well-being.

Correction date: The licensee disposed of all expired materials at the time of the inspection.

Inspection and exit interview conducted with Kelly Maxwell and the facility representative.
