3.130

Watering.

There is a buildup of dirt and debris on the inside of the main automatic waterer in the the large sheep pen. The water is clear and the health of the animals does not appear to be impacted by the condition of the waterer at this point. Failure to clean water receptacles on a regular basis can deter the sheep from drinking and introduce disease hazards to the animals. The licensee must clean the waterer at a frequency that will ensure potable water is provided to the regulated animals in a sanitary receptacle.

Correct by October 11, 2020.

This inspection and exit interview were conducted with the licensee.
