ADEPT DIESEL SERVICE

Type: ROUTINE INSPECTION
Date: 05-OCT-2015

3.29(d)

FEEDING.

There are at least 7 rusty self-feeders housing the adult breeders that can no longer be properly cleaned and sanitized. The rusty self-feeders must be replaced or repaired so that the feeders can be adequately cleaned and sanitized. Inadequate cleaning and sanitation of self-feeders potentially exposes the animals to disease. All food receptacles must be kept clean and must be sanitized at least once every 2 weeks. Correct by October 19, 2015.

3.30

WATERING.

Three water bottle were observed with large amounts of surface and free-floating green algae like debris. The presence of algae indicates that the current cleaning and sanitation process is not adequate. Failure to clean and sanitize water bottles with adequate frequency may allow excessive growth of algae or bacteria. Any such contamination potentially exposes the animals to disease. Correct by ensuring all water receptacles are cleaned and properly sanitized at least once every two weeks or more frequently if necessary. Correct by October 5, 2015.

An exit briefing was conducted with the owner.
