Certificate: **23-A-0711**
Site: 001
JOHN & VERNA KING

Type: ROUTINE INSPECTION
Date: 14-JUL-2025

2.75(b)(1)

Records: Dealers and exhibitors.

A current record of guinea pigs on hand was not available for review during this inspection. A total of 295 adult, weanling, and newborn guinea pigs were counted during this inspection.

Failure to maintain these records can make it difficult to assess the health of the colony by identifying animal losses by deaths or decreased numbers of animals born and to track animals being used in regulated activities to ensure their humane care and use.

The facility must maintain records containing the required information for animals which fully and correctly disclose the number of animals held, owned, and acquired or disposed of including births and deaths.

Correct by: August 11, 2025

3.31(a)(1)

Sanitation.

The guinea pig pens contained a large amount of soiled, wet bedding especially in the areas of the automatic waterers. In addition, there was a large amount of fecal material and discarded food and hay mixed with the bedding and the pens were in need of more frequent cleaning.

The accumulation of feces and unclean enclosures can cause unpleasant odors, lead to contamination of the enclosure, and attract pests and vermin that carry diseases that result in risks to the health of the animals.

Enclosures must be cleaned and sanitized as often as necessary to prevent a build-up of debris and fecal material and sanitized at a minimum of once every two weeks.

Correct by: July 28, 2025

3.31(c)

Sanitation.

There were numerous flies inside the guinea pig building. Flies were entering the building from the open garage door. There was fencing over part of the open door but the size of the openings in the fence were not small enough to prevent flies from entering.

Excessive pests such as flies can cause discomfort to the animals and result in increased disease spread.

An effective program for the control of flies must be established and maintained.
