Certificate: **74-R-0190**

Site: 003

Bioo Scientific Corporation

Type: ROUTINE INSPECTION

Date: 29-OCT-2015

2.33(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.

Non pharmaceutical grade phenobarbital is present and inspector was told it is mixed into a solution by employees when needed for rabbit euthanasia. The use of a non pharmaceutical grade chemical compound is not an acceptable method of veterinary care when a veterinary pharmaceutical product is available. It must not be used for euthanasia. The attending veterinarian must be contacted concerning the proper veterinary euthanasia product to use for rabbits.

CORRECT BY : next euthanasia or by 11-29-15

2.36(b)(5)

ANNUAL REPORT.

The annual report has been submitted however the number of rabbits reported is incorrect. There were 10 rabbits reported and far more than that have been used by this facility in the past year. The annual report must state the common names and the numbers of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs. Routine procedures (e.g., injections, tattooing, blood sampling) should be reported with this group.

The annual report must be amended and resubmitted with the correct number of animals for this reporting period.

CORRECT BY 12-1- 15

3.51(b) REPEAT

FACILITIES, INDOOR.

There is a strong ammonia odor at one end of the rabbit room. This was also a problem noted on the inspection dated 8/20/14. The odor was strong enough to cause my eyes and nose to burn and can be expected to cause similar discomfort to the rabbits. An overhead exhaust fan at one end of the room is not working this date.

Facility employee stated that the fan is scheduled to be repaired but may take at least 2 more weeks. Additional ventilation methods and more frequent cage cleaning must be used to reduce ammonia levels. Adequate ventilation must be provided at all times to provide for the health and comfort of the animals.

Prepared By: ELIZABETH PANNILL, D V M USDA, APHIS, Animal Care

Inspection Report

CORRECT BY : 11-2-15

3.51(d)

FACILITIES, INDOOR.

The back left corner of the wall in the rabbit room is stained with urine. The paint is peeling in an area behind the upper cage. The wall can not be properly sanitized in this condition. Interior surfaces must be constructed and maintained so they are impervious to moisture and may be readily sanitized.

CORRECT BY : 11-30-15

The inspection and exit briefing was conducted with VP for Research
