Type: ROUTINE INSPECTION
Date: 16-OCT-2023

2.134(a)

Contingency planning.

A developed contingency plan was not available at time of inspection. Contingency plans help prepare registrants on how to provide humane handling of animals during emergent events. The registrant must develop a complete contingency plan tailored to the conveyance, business operations and species of animals transported.

Correct by 30 November 2023.

3.15(a)(3)

Primary enclosures used to transport live dogs and cats.

The registrant confirmed the use of wire folding crates as primary enclosures during transportation of dogs (iCrate model 1530DD). The openings between the wires measure approximately 1.5" wide by 4" tall. The construction of this type of transport enclosure may allow dogs to put parts of their body outside the enclosure. Primary enclosures used to transport dogs and cats must be constructed so that the dog or cat is at all times securely contained within the enclosure and cannot put any part of its body outside the enclosure in a way that could result in injury to itself, to handlers, or to persons or animals nearby.

Correct from this date forward of 20 October 2023.

This inspection and exit interview were conducted with registrant.
