Certificate: **43-A-6110**
Site: 001
FANNIE SCHWARTZ

Type: ROUTINE INSPECTION
Date: 12-JAN-2021

3.4(b)(4)

Outdoor housing facilities.

The shelters in approximately one-half of the 36 outdoor enclosures had an inadequate amount of bedding material for the current temperatures. The cement floor of the shelters had a small amount of bedding material (shavings) but at least one half of the floor was bare in most of those shelters. The temperature at the time of the inspection was 47 degrees F (Kestrel reading) and the overnight temperatures have been less than 35 degrees F (local weather reports). Bedding material is important to protect the dogs from the cold temperatures and to help preserve body heat. Lack of appropriate bedding in cold environments increases the risks of sickness and hypothermia conditions. Sufficient clean, dry bedding material is necessary to provide protection when the temperature is less than 50 degrees F. More bedding material is necessary when the temperature is less than 35 degrees F for the dogs to have better protection. The owner must provide sufficient bedding for the dogs and maintain it.

Correction date: 12 January, 2021

Note: Bedding was being provided before the inspector left the premises.

This inspection and exit interview were conducted with facility representatives.
