Type: ROUTINE INSPECTION

Date: 07-APR-2015

3.81(e)(1)

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

***There is 1 male capuchin nonhuman primate that is individually housed at the facility. This animal was acquired on 9/4/14 and has been housed individually since arrival at the facility, due to quarantine procedures and compatibility issues. Additionally, the nonhuman primate is unable to see or hear other nonhuman primates. The attending veterinarian is not reviewing this animal's exemption from participation in the enhancement plan.

The attending veterinarian may exempt an individual nonhuman primate from participation in the environment enhancement plan because of its health or condition, or in consideration of its well-being. The basis of the exemption must be recorded by the attending veterinarian for each exempted nonhuman primate. Unless the basis for the exemption is a permanent condition, the exemption must be reviewed at least every 30 days by the attending veterinarian.

To be corrected by 4/24/15.

3.81

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

***An environmental enhancement plan to promote the psychological well-being of the nonhuman primates currently housed at this facility is incomplete. The plan, at a minimum, must address each of the following: social grouping, environmental enrichment, special considerations, restraint devices and exemptions, when applicable. Currently, the plan made available during inspection, only addresses environmental enrichment. The plan must be completed, in accordance with the currently accepted professional standards as cited in appropriate professional journals or reference guides, and as directed by the attending veterinarian.

To be corrected by 4/24/15.

3.125(a)

FACILITIES, GENERAL.

*** The primary enclosure housing 1 male prairie dog, had several sharp points protruding up from the wire mesh enclosure floor. The sharp wire mesh poses a risk of injury to the animal and can decrease the structural stability of the floor. A system should be in place and maintained to ensure all animal facilities are structurally sound and in

Inspection Report

good repair to protect the animals from injury.

To be corrected by 4/10/15

***On 3/8/15, a kit fox escaped its temporary enclosure. The licensee stated, during the night, the animal dug under the gate and was able to gain access to the shift area. Once in the shift area the animal was able to squeeze between the gate and fence post and escape the enclosure. The facility has set-up live traps but has been unable to recover the animal. The indoor and outdoor housing facilities shall securely contain the animals.

To be corrected moving forward

3.129(a)

FEEDING.

***The facility is feeding the tiger and bear raw meat on enclosure surfaces that are not cleaned and sanitized. During the tiger feeding, the APHIS inspector and Veterinary Medical Officer noted the tiger meat was placed on an enclosure rock and concrete pad. The rock had dried blood, other debris and flies on it. The bear meat is set up on a log that also had dried blood and debris on it along with splintering wood. Surfaces in which food is placed should be clean so that the food does not become contaminated. Contaminated food may harbor pathogens and cause disease in the animals. Also, the nutritive value of contaminated food is unknown. The licensee must ensure that all food shall be wholesome, palatable, and free from contamination and of sufficient quantity and nutritive value to maintain all animals in good health.

To be corrected by 4/17/15

Inspection and exit briefing were conducted with the Animal Care Inspector, Veterinary Medical Officer and 2 facility representatives.
