

Inspection Report

Tri State Zoological Park Of Western Maryland
12605 Moores Hollow Road
Cumberland, MD 21502

Customer ID: **15730**

Certificate: **51-C-0064**

Site: 001

TRI STATE ZOOLOGICAL PARK OF WESTERN MARYLAND

Type: ROUTINE INSPECTION

Date: 06-NOV-2014

3.81(c)(4)

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

***The marmoset is housed in a room with no other animals and is unable to hear or see other non-human primates. There is no environmental enrichment plan for the marmoset. A plan for environmental enrichment must be developed, documented, and followed to promote the psychological well-being of non-human primates. An environmental enrichment plan must be developed with the attending veterinarian to include provisions to address the special needs of a single-housed marmoset that does not have the ability to hear and see other non-human primates. Correct by November 21, 2014

3.125(a)

FACILITIES, GENERAL.

***The board fencing for the petting zoo animals is excessively worn and portions of the fence are leaning. One section of the goat/pig/horse pen has a partially broken post. Primary enclosure fencing should be structurally sound to contain the animals. The board fencing must be repaired as needed or replaced to ensure containment of the petting zoo animals. Correct by December 30, 2014. NOTE: A maintenance plan has been developed.

3.127(d) REPEAT

FACILITIES, OUTDOOR.

***The facility is closed at the time of the inspection. Three persons gained entry into the zoo and was able to walk to the back of the property before being noticed. The entrance gates, which are part of the perimeter fence, were open. The inside entry gate to the petting zoo area was shut. The perimeter fence must prevent the entry of unwanted humans for the protection of the public and animals at all times. Measures must be taken to ensure the perimeter fence is secure when an attendant is not readily available in any area of the zoo.

3.131(c)

SANITATION.

Inspection Report

***The outdoor rug in the kitchen has been recently cleaned. However, the fibers of the carpet are sufficiently worn that it can no longer be cleaned and sanitized effectively. Surfaces should be cleaned as needed to prevent excessive soiling and must be sanitizable. The carpet should be replaced to facilitate the cleaning and sanitization practices in the kitchen area. Corrected: Carpet replaced at the time of inspection.

***A portion of the primary perimeter fence (there is a secondary perimeter fence) for the young tigers is movable. Fencing should be secured in a manner that ensures it function as primary containment should a tiger escape. Measures should be taken to ensure the fence is sufficiently secure to facilitate containment of the animals in the event of an escape. Correct By November 14, 2014

An exit briefing was conducted with the owner.
