Type: ROUTINE INSPECTION
Date: 03-AUG-2021

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A large portion of the sika deer have overgrown hooves. Two alpacas were observed with incisors that need to be trimmed. The white alpaca with long teeth also has long toes. Overgrown hooves can lead to secondary issues such as arthritis and discomfort. Overgrown teeth can result in injuries to lips and gums and can interfere with eating. Trim the teeth and toes of the white alpaca and the teeth of the brown alpaca. Trim the feet of all other domestic hoof stock that are in need. Consult with the attending veterinarian to develop a plan for addressing the sika deer hooves and the white tail deer hooves if needed.

Correct by: 8-17-21

3.131(d)

Sanitation.

The sika deer were being bothered by biting flies when they left the back of their pen to approach the area where public feeding was allowed. Flies were swarming their legs and they were stamping in response to the irritation. A safe and effective means of pest control must be provided for these animals to minimize the discomfort caused to them by these pests.
