Type: ROUTINE INSPECTION  
Date: 24-APR-2023

---

### 3.25(c) Repeat

#### Facilities, general.

The area around the food and bedding supply has excessive trash and clutter. Areas of trash and clutter can allow vermin such as rats and mice to nest and hide and then contaminate food and bedding. Contaminated food and bedding could make the guinea pigs sick. Protect the food and bedding supply by removing the trash and clutter and storing the supplies in a manner that protects them from contamination.

### 3.28(a)(1) Repeat

#### Primary enclosures.

Some areas of enclosures are in need of repair;

-Fourteen feeders on the middle/south row of enclosures and nine feeders on the north row had rusted, rough and sharp edges in areas that guinea pigs contact the feeders.

-The 56 enclosures closest to the east door have an area of rust that is forming where the enclosure wall contacts the bedding area.

Rough and sharp edges could hurt the guinea pigs and rusted surfaces are no longer smooth and are difficult to properly clean and sanitize.

This inspection and exit interview were conducted with a facility representative.
