Site: 001

East Coast Exotic Animal Rescue  
Inc

Type: ROUTINE INSPECTION

Date: 13-FEB-2025

### 3.150(a)

#### Facilities, general.

In the enclosure housing three emus, a large tree has fallen onto the exterior fencing. The tree is still suspended on the chain link fencing and has caused the fence to collapse by several feet.

An unstable fence and suspended tree greatly impact the integrity of the enclosure and can potentially injure, entrap, or allow for the escape of the emus.

Enclosure fences must be constructed so that they are structurally sound, in good repair, protect the birds from injury, and restrict other animals from entering the enclosure.

Correct by removing the tree and ensuring that the fence is structurally sound for the emus.

Correct by: February 28, 2025.

### 3.125(a)

#### Repeat

#### Facilities, general.

In the enclosure housing seven goats and a zebu, there are several areas in a state of disrepair. On the left and rear walls of the large red shelter, there are multiple holes near the ground where an animal could become entrapped. The holes range in size from approximately 4 inches to 12 inches in length. In the small red shelter, wooden boards on the left and right walls have been partially pulled off the wall which has caused large gaps and exposed sharp nails at the level of the animals. Additionally, a small white shelter, in this enclosure, has partially collapsed leaving broken boards and an unstable structure.

In the far right corner of the cougar enclosure, a wooden board has detached from the resting platform which has exposed screws at the level of the animals. The plywood on the top of the platform is bowed downward and appears unstable.

Enclosures with holes, gaps, or unstable structures can allow for entrapment or injury of the animals.

The facility must remove, repair, or replace the above mentioned items in the enclosures to protect the animals from injury.

This inspection and exit interview were conducted with facility representatives.
