CHILDRENS HOSPITAL BOSTON

Type: ROUTINE INSPECTION

Date: 27-AUG-2024

2.31(c)(7)

Institutional Animal Care and Use Committee (IACUC).

In the morning of November 8th, 2023, a sheep did not receive a dose of post-operative medication as described in the IACUC approved protocol. A deviation from post-operative care described in the protocol has the potential to impact the health and wellbeing of study animals and constitutes a significant change to approved activity that did not undergo IACUC review and approval. Significant changes to ongoing activities must be reviewed and approved by the IACUC before they are implemented.

The missed dose was identified and administered by veterinary staff during routine clinical review later that morning. This was voluntarily reported to USDA and corrective measures had been implemented prior to inspection. To remain corrected after September 4th, 2024.

This inspection and exit interview were conducted with facility representatives.
