Type: ROUTINE INSPECTION

Date: 28-FEB-2022

2.40(b)(3) **Direct** **Repeat**

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

***The adult male capybara has a generalized thinning of its fur of unknown cause.

***One prairie dog has no fur on its tail and patches of thinning, ruffled fur.

The attending veterinarian has not been contacted to discuss the condition of the animals in a timely manner. In doing so, the proper diagnosis and treatment for the condition of the fur is delayed.

It is important to maintain direct and frequent contact with the attending veterinarian when animals demonstrate any illness or abnormal medical condition to ensure optimum health of the animals and to minimize the spread of disease. The prairie dog and the male capybara must be examined by a veterinarian for diagnosis and treatment for the abnormal haircoats. Additionally, a plan to report illnesses to the attending veterinarian in a timely manner must be developed and followed. Correct by March 8, 2022. The licensee has scheduled an appointment with the veterinarian on March 8, 2022

3.129(a)

Feeding.

The table in the warm room is dirty and has clumps of a brown material that appears fecal in nature. A closed bag of peanuts and an open box of sweet potatoes are stored on the table. Foodstuffs should be stored in a manner to minimize

contamination. Food preparation surfaces must be kept clean and sanitary for the health of the animals. Adequate husbandry practices must be implemented that ensure food items are free from contamination. Correct by March 4, 2022

3.131(a)

Sanitation.

Cleaning of Enclosures

The warm room houses bettongs, and a prehensile tailed porcupine. Some of the animals and pets roam free in the warm room - capybara, baby kangaroos, a wallaby, a prairie dog, and various other mammalian pets, emu chicks, and tortoises.

The floor has an accumulations of an excessive amount of bedding, dried fecal matter, and food material, especially in the corner by the refrigerator and wood stove. Excreta and debris should be removed from enclosures as often is necessary to prevent contamination of the animals and to minimize disease. The excreta and bedding should be removed at a frequency to prevent an excessive accumulation. Correct by March 8, 2022

3.131(c)

Repeat

Sanitation.

Housekeeping

***There are still building materials and farm equipment left in the farm animal pasture where the alpacas, llamas, sheep, goats, and pigs roam. The items include wood planks and poles and a pallet, metal poles with concrete attached, panel fencing, sheets of wood, and farm equipment (blade attachments).

***The lower panel of the refrigerator in the warm room is detached and has exposed the cooling parts. A prairie dog and a pet guinea pig was seen scurrying back and forth under the refrigerator through the opening.

Inspection Report

***The warm room where the animals roam freely throughout the day has a lot of unused and or unnecessary items haphazardly stored throughout the room. Items such as a ladder and other equipment are being stored on top of the porcupine and bettong enclosures. Other Items include: tools, unplugged heaters, hanging cords, miscellaneous equipment in an open drawer on the stairs,

Unnecessary supplies and other equipment and items in disrepair left in pastures or stored in indoor housing spaces expose the animals to injury and illness. Grounds and buildings should be kept in such a manner that protects the animals from injury and to prevent illness. Unnecessary equipment and supplies must be kept in good repair, removed and/or stored in manner that prevents direct animal contact for the animals health and safety.

This inspection and exit interview were conducted with the licensees.
